Get All Document Types

This API allows taxpayer's systems to retrieve list of document types published by the MyInvois System.

[← Login as Intermediary System]   [Get Document Type →]

Overview

The main function of the MyInvois System is to enable submission of the issued documents to tax authority. There are multiple types of documents supported by the solution and this API allows taxpayer ERP systems to retrieve their definitions through API call.

Signature

This is REST based API that does not take additional URL parameters, yet it returns the list of active and deactivated document types that were once active.

Signature: `GET /api/v1.0/documenttypes`

Inputs

This API accepts standard e-Invoice API header parameters for authenticated call.

No additional URL or request body parameters are provided to this API.

Outputs

Successful Response

This API returns HTTP status code `200`.

The resulting structure is part of a single object `result` that includes list of `DocumentType` elements.

Output list of Document Types contains:

OUTPUT PARAMETER	TYPE	DESCRIPTION	VALUE EXAMPLE
id	Number	Unique identifier of the document type	45
invoiceTypeCode	Number	The document type code from the possible values: `01`, `02`, `03`, `04`, `11`, `12`, `13`, `14`	04
description	String	Description of the document type	Invoice
activeFrom	Date	Date when the activity of the document type started	2015-02-13T13:15:00Z
activeTo	Date	Optional: date when the activity of the document type ends	2027-03-01T00:00:00Z
documentTypeVersions	Array of document type version summary objects	1 or more array values	

Array of document type version summary objects contains:

OUTPUT PARAMETER	TYPE	DESCRIPTION	VALUE EXAMPLE
id	Number	Unique identifier of the document type version	454
name	String	Unique name of the document type version	1.0
description	String	Description of the document type version	Invoice version 1.1
activeFrom	Date	Date when the activity of the document type version started	2015-02-13T13:15:00Z
activeTo	Date	Optional: date when the activity of the document type version ends	2027-03-01T00:00:00Z
versionNumber	Decimal	Unique version number of the document type version	1.1
status	String	Status of the document type version - `draft`, `published`, `deactivated`	published

Error Response

Error situations are reported back by this API through the standard error response.

No custom error codes are provided by this API.

Additional considerations

When document type list is returned to caller, they can query more detailed information about document type or document type version using returned internal identifiers.
